

# Fortify Network - Profile and Protect

**Cyber attacks can infiltrate a network and do damage behind endpoint protection. Consistent monitoring and reporting of all network activities can identify and stop attacks before they damage or remove data from hidden backdoors.**

Fortify Network is a comprehensive Security Information and Event Management (SIEM) solution that monitors network activity and helps you meet HIPAA, PCI and NIST-800 regulations.

The solution manages information from network devices, collects network logs and stores the data for easy retrieval.

The Fortify Security Operations Center (SOC) monitors network activity and assists in compiling reports and supporting compliance needs.

*"It helped us develop a better security business than we could have built ourselves. Instead of having to assemble our own offering, everything we need is in the portal. That means partners can go to market tomorrow instead of six months from now."*

**Steve Tygat**  
Founder, Tyneso, Benelux

## Benefits

### Automatic Correlation and Detection

Advanced monitoring technology identifies and isolates potential threats allowing security experts to stop and remediate any damage.

### Meets Compliance Standards

Fortify Network complies with HIPAA, PCI and NIST-800 regulatory standards. The SIEM generates daily reports for all three regulations and continuously logs all network activities.

### Accurate Event Diagnosis

Reduces false positives and event diagnosis fatigue lowering support costs and reporting requirements.

## How we do it better

Delivering smarter, faster insights

Automated event correlation

Unified dashboards for all security tools

Log monitoring and management

Reporting for compliance requirements

SOC expertise and assistance

## Key features

### Automated Correlation

Security events across tools provides faster identification of issues through more comprehensive understanding of each threat including increased ability to discover advanced attacks

### Reduce false positives

More accurate event diagnosis not only reduces event fatigue but lowers the costs of partners to manage incidents.

### Monitoring and analysis

Monitor key log files to identify and correlate events that could be malicious, while providing additional security and adherence to regulatory guidelines. Please check with your account manager or sales representative for the list of supported devices.

### Advanced reporting for compliance

Generate daily reports and threat analysis outlines for three regulatory standards: HIPAA, PCI and NIST-800.

### Threat intelligence support

The Fortify SOC works together with you to identify threats on servers and firewalls and support compliance guidelines through a fully integrated range of response capabilities, keeping client environments and data safe and available 24x7.

### Ultimate SIEM Technology

Fortify for Network Security provides a SIEM platform combining innovative automation technology with optimized dashboard visuals that accelerates incident response and remediation. Coupled with our global SOC to deliver the best solution for SMBs that need to meet compliance requirements, audit reporting and visibility into customer environments is a breeze.

## Fortify

Cybersecurity

*For the MSP  
For Assessment and  
Assessment Plus  
For Protection  
For Endpoint Security  
For Network Security*

**Fortify** enables MSPs to deliver managed detection and response services without building and maintaining in-house operations. With Continuum Fortify you can design and implement custom security solutions at every client site, with support of automatic event correlation, advanced alerting, and rapid response.
