

Cybersecurity Maturity Model Certification (CMMC 2.0)

Prepare for, and maintain compliance with the cybersecurity requirements of the Department of Defense (DoD), as a part of your overall IT security assurance programs.

Stay Ahead of the Changing Rules

With the nation's security on high alert, the DoD is cracking down on all contractors to be sure they don't represent a security risk. Data Magic Compliance Manager GRC is the best way to stay on top of the changing rules and ensure the requirements are being met.

Perform a Rapid Baseline Assessment

Data Magic Compliance Manager GRC gives you the option of using the Built-in CMMC 2.0 management templates to quickly assess how close you are to certification readiness for Level 1 or 2, and highlight the gaps.

Calculate Your SP 800-171 Risk Score

Data Magic Compliance Manager GRC includes an interactive score sheet that uses the Department of Defense's specific methodology for determining the standardized score you must submit as part of the Interim Rule.

Automatically Generate Your SSP and POA&M

As you undergo the full assessment process for each individual control at each CMMC Level, you can systematically (and in some cases, automatically) upload your supporting documentation to speed up the audit process.

Data Magic Compliance Manager GRC generates the required System Security Plan (SSP) and Plan of Action & Milestones (POA&M).

Data Magic Compliance Manager GRC for CMMC automatically gathers data from your computers, LAN and the Microsoft Cloud which is needed as part of your evidence of compliance.

As you work through the various Data Magic CMMC requirements, you will have the ability to upload any supporting documents. These documents will be stored and accessible to any auditor or third-party assessor to speed the process.

Manage All Your IT Requirements

The Engagement will begin with a kick-off call where you will be introduced to the Compliance Services Pro Team and given an overview of the Engagement Process. During this call we will review your customer profile to ensure all information required for the assessment process is documented and in the right hands. We will also discuss the technical details needed to gain access to the environment for deployment of agents and CM-GRC portal access.

Manage End User & Vendor Risk

Data Magic Compliance Manager GRC includes a "self-serve" portal you can brand and set up for end-users and/or employees to deliver basic Security Awareness Training. Have them read and agree to any of your policies. It also includes a separate vendor risk management portal where you can track your vendors' compliance with your standard.
